DRIVING THE TECHNOLOGY OF CONTAMINATION CONTROL

BECAUSE THE SMALLEST MEASURE CAN MAKE THE BIGGEST DIFFERENCE

Berkshire is the global contamination control leader for clean room and controlled environment consumable products. We provide customers with technically advanced materials aimed at application specific performance solutions. For over 50 years Berkshire has understood and delivered world class manufacturing, reliable supply chain, the highest standards of quality, and technically advanced products.

WHY BERKSHIRE? Engineered Clean

- 1 Quality Programs:**
ISO9001 Certified
SPC
CAPA system
FMEAs
IQ, OQ, PQ

Results:
Superior level of quality, consistency, traceability - the world's cleanest and trusted contamination control products
- 2 How do you determine if your cleanroom supplies are right for your processes?**

Berkshire conducts facility audits that will result in an objective set of observations and recommendations resulting in improved processes and lower TCOO.
- 3 Global Support**

WIPER TEST METHODS

CLEANLINESS

Fibres

A wiper is “washed” in water using a biaxial shaker for five minutes. The fibres released into the water are filtered onto a membrane and counted microscopically. The results are expressed as fibres $\geq 100\mu\text{m}$ per square centimetre of wiper.

(IEST-RP-CC004.3, Section 6.2.2)

Particle Generation - Biaxial Shake Test/Orbital Shake Test

A wiper is “washed” in water using a biaxial/orbital shaker for five minutes. A liquid-borne particle counter then counts the particles released into the water. By dividing the total number of particles released by the area of the wiper, the results are expressed as particles $\geq 0.5\mu\text{m}$ per square centimetre of wiper.

(IEST-RP-CC004.3, Section 6.1.3 / IEST-RP-CC004.3, Section 6.1.4)

Airborne Particle/Helmke Drum Test

Under controlled conditions, ten wipers are tumbled in a rotating drum to release particles from the wiper fabric. An airborne particle counter counts released particles and results are expressed as the number of particles per wiper per cubic foot of air sampled.

(IEST-RP-CC003.4 Section B2.5)

SORBENCY

Sorbency

A sample piece of material is saturated with as much fluid as it can hold. After one minute, the material is weighed, and results are expressed in millimetres of fluid per square meter. (IEST-RP-CC004.3, Section 8.1 - modified)

Efficiency

This calculation indicates how well a material absorbs, relative to others. Results, expressed in millimetres of liquid per gram of material, assist in comparing one raw material with another.

Rate

This test is a measurement of the time it takes a wiper to absorb a liquid. Results are expressed in seconds. (IEST-RP-CC004.3, Section 8.2 - modified)

PURITY

Non-Volatile Residue

Berkshire generates non-volatile data using both deionised water and 2-Propanol. Results are expressed in grams of extractables per square metre of wiper, which is a useful guide to relative purity of wipers. (IEST-RP-CC004.3, Section 7.1.2)

Metallic Ions

Ions are extracted in deionised water and quantitatively analysed by Ion Chromatography. Results are stated in parts per million (ppm). (IEST-RP-CC004.3, Section 7.2.2)

CHOOSE YOUR WIPER SUBSTRATE

NON-STANDARD OPTIONS AVAILABLE

new substrate, special size, packaging configuration, and saturation level

NONWOVENS

ADVANTAGES

Natural and synthetic
 Good strength
 More absorbent than knitted
 Very consistent
 Works well with bleaches, quaternary ammonium compounds
 Less expensive than knitted

CONSIDERATIONS

Higher levels of fibre and particle contamination
 Poor in abrasive conditions
 Cannot be laundered

BERKSHIRE OPTIONS

55% cellulose/45% polyester	58% polyester/42% lyocell	100% polyurethane foam
100% cotton	100% polypropylene	50% rayon/50% polyester
100% polyester	60% polypropylene/	63% abaca/37% softwood
60% cellulose/40% polyester	40% cellulose	100% manila hemp
	100% microfibre polyester	70% rayon/30% cellulose

KNITTED/ LAUNDERED/ SEALED EDGE

ADVANTAGES

Tubular/sealed edge means low particle and fibres
 Typically nonabrasive
 Extremely pure
 Durability better than nonwovens
 Absorbent
 Works well with bleaches, quaternary ammonium compounds
 Low NVRs and ionic levels

CONSIDERATIONS

Laundered sealed edge wipers are more expensive.
 Not as absorbent as nonwovens

DID YOU KNOW?

Nylon microfibre has an incredibly soft hand

BERKSHIRE OPTIONS

100% continuous filament polyester	70% polyester/30% nylon microfiber
100% polyester microfibre	80% polyester/20% nylon microfiber

KNITTED/ LAUNDERED/ UNSEALED EDGE

ADVANTAGES

Particle, fibre levels of laundered knits are lower than nonwovens
 Typically nonabrasive
 Extremely pure
 Durability better than nonwovens
 Absorbent
 Works well with bleaches, quaternary ammonium compounds
 Low NVRs and ionic levels

CONSIDERATIONS

Laundered wipers are more expensive
 Higher in fibres than sealed edge version
 Not as absorbent as nonwovens

BERKSHIRE OPTIONS

100% continuous filament polyester

SATPAX® PRESATURATED WIPERS GUIDE

Sterile pre-wetted wipers have the lot no. on each pack with a 3 year shelf life.

ADVANTAGES

Health & Safety - no mixing and storing of hazardous liquids

Contamination - minimise volatile organic compounds (VOCs)

Control - no over-spraying or wetting of surfaces

Consistency - problems associated with under-or over-wetting the wiper are eliminated

Economy - greater cleaning efficiency and cleaning protocol consistency and effectiveness can be obtained

DEFINITIONS

DI (deionised) Water: Water that has had its mineral ions removed, such as cations from sodium, calcium, iron, copper and anions such as chloride and bromide.

WFI (Water for Injection): USP Water for Injection is prepared from water complying with quality attributes of "Drinking Water." Purified by distillation or a purification process that is equivalent or superior to distillation in the removal of chemicals or microorganisms. WFI water is tested and certified to be at or below a certain level of endotoxins.

IPA: Isopropyl alcohol can be produced in several distinct grades. The two most commonly used in pre-wetted wipers are USP and Semiconductor grades. The primary difference between the two grades is the level of purification. Semiconductor grades have much more stringent requirements for metallic content and therefore are much purer in use. USP grade is typically used for sterile products while semiconductor grade is typically used in all other products.

VOCs: Volatile organic compounds (VOCs) are organic chemicals that have a high vapour pressure at ordinary room temperature. Their high vapour pressure results from a low boiling point, which causes large numbers of molecules to evaporate or sublime from the liquid or solid form of the compound and enter the surrounding air.

SatPax® complies with the Global Harmonized System of Classification and Labeling of Chemicals

CHOICE® WIPER SELECTION GUIDE

CHOICE®

from **Berkshire**®

CHOICE® is a value tiered category of wipers offering all the performance consistency of higher priced wipers. Best of all, **CHOICE**® is from **Berkshire**, the most trusted name in cleanroom supplies, which means quality you can count on.

PACKAGING

All Berkshire wipers come in high quality, chemical resistant packaging material that has been tested for cleanroom use. All the wipers are double bagged for easy transfer and wipe down. **CHOICE**® wipers are packaged in stacked and value (bulk) configurations.

VALUE (BULK) PACKAGING

Value (bulk) packaged product is placed into a bag with a cursory inspection. The sheet count is arrived at by weight. There is 0% difference in performance between a value (bulk) packed and stacked product. There is however, a cost savings in a value (bulk) packaged wiper.

STACKED PRODUCT

Each wiper is inspected and stacked one on top of the other. The end result is a square pack that allows each wiper to be removed individually from the stack.

CHOICE® MOPS & ACCESSORIES

CHOICE® MicroFibre Looped String Mop Head

Microfibres are tiny fibres that have been split to produce ultra-fine fibers estimated to be at least 0.16cm the size of a human hair. When knitted together these fibres create a surface area covered with millions of spaces between the fibres to trap moisture, dirt and debris. This technology allows for the dirt and liquids to be “picked up” rather than being pushed around.

Features and Advantages

- White 88% polyester/12% nylon microfibre string mop with blue headband and tailband
- Microfibre yarns attract and trap dirt and debris
- Terry knit structure enhances absorbency to increase efficiency
- Tubular knit construction with sewn head and tail bands provides added durability
- Lot number assures traceability
- Autoclavable

CHOICE® Mop Handle & Clamp

Economical CHOICE® lightweight mop handle & clamp accommodates most size string and loop mop heads.

Handle: Features and Advantages

- Anodised aluminum handle with blue polypropylene hand grip
- Fixed length at 140cm
- Easily connects to clamp
- Corrosion and chemical resistant
- Not autoclavable

Clamp: Features and Advantages

- Blue polypropylene mop clamp
- Latch-style swing-away bar for quick and easy mophead changes
- Easily connects to handle
- Corrosion and chemical resistant
- Autoclavable

Pro-Wipe® OS

100% polypropylene

Pro-Wipe® OS is specifically designed to absorb oil and repel water.

Advantages:

- Lot to lot traceability
- Complies with FDA 21 CFR 176.170 - 177.1520 for food grade applications (3rd party test data available)
- Excellent resistance to acids and bases
- Low linting

ADVANTAGES

- Autoclavable (not recommended for blue bond)
- Purest cellulose minimises contamination
- Full lot tracing on every case ensures consistent quality and control
- Specialised coating reduces particles and fibres generation
- Retains ink from laser copiers and ball point pens. Not compatible with ink jet printers.
- Heat resistant under extreme printer temperatures

APPLICATIONS

- Cleanroom manuals, work instructions, standard operating procedures (SOPs)

BCR® GLOVE LINERS - GLOVE LINERS ARE EXCELLENT FOR UNDER GLOVES/GLOVING.

HAND HEALTH AND OPERATOR COMFORT

BCR® glove liners are manufactured without the use of latex. Glove liners enhance operator comfort by reducing perspiration and contact/heat dermatitis associated with wearing latex, nitrile, neoprene and other gloves. They are ambidextrous for easy stock control and can be relaudered for multiple use.

Each glove liner is constructed using a special seamless technique.

CONSTRUCTION

Sock tips are made by sandwiching the swab handle between multiple layers of thermoplastic head material. The head material is completely sealed and bonded to the handle with heat and pressure. No contaminating adhesives are used in the manufacturing of Berkshire's sock tip swabs.

PACKAGING

Lab-Tips® are double bagged in cleanroom bags manufactured from high purity polyethylene resin that ensures ultra-low organic and inorganic residues. Bags are free from silicone, amides, and DP and comply with RoHS directives. An easy tear notch and solvent resistant inner pack labels ensure ease of use.

LAB-TIPS® KNITTED POLYESTER SWABS

CLEANROOM LAUNDERED DOUBLE LAYER 100% POLYESTER KNIT SWAB HEADS

Berkshire's knitted polyester swabs are made from cleanroom laundered, continuous filament polyester for exceptional purity. They offer low ionic contamination levels along with excellent durability and absorbent capacity. Knitted polyester swabs have excellent chemical resistance and are compatible with organic solvents. The handles are made of 100% polypropylene.

LAB-TIPS® OPEN CELL (RETICULATED) FOAM SWABS

CLEANROOM LAUNDERED 100 PPI OPEN CELL POLYURETHANE FOAM SWAB HEADS

Open Cell or reticulated foams are structures in which the cell windows have been removed by thermal or chemical means. This process results in a structure that has excellent liquid retention and particle entrapment capability. Berkshire's open cell foam swabs have excellent chemical resistance and are compatible with organic solvents.

PPI = Pores/Linear Inch. The number of cells per linear inch in the foam membrane. A measure of foam density.

ERGONOMIC CLEANROOM FLAT MOP SYSTEM

The ergonomic Flat Mop holder is a versatile flat mop suitable for almost all application areas. Your cleanroom staff can attach mops faster and more efficiently than ever. Thanks to the cleanroom flat mops V shape, it slips smoothly into the pouches of the mop reducing bending and decreasing injury.

- Ergonomic working hand-switch opening of the holder and mop discarding while standing upright
- No touching of soiled mops when discarding
- Completely flat action for cleaning under and behind equipment

BCR® CLEANROOM FLAT MOP WIPERS

All the wipers are disposable and measured to fit the Mop Head Frame. More than one wiper can be attached to the mop head at a time. After mopping the area, the outer wiper can be disposed of and the remaining wipers are ready for the next mopping phase. This guarantees a fresh wiper is used for each new phase.
